

WELCOME TO

# Digitizing Dentistry

Evaluating the Impact of Intraoral Scanners  
on Student Assessments

Presented by: Joint Effort

# Our Supervisors!

**Dr. Peter McDermott**

**Assistant Director:  
Quality Improvement**

**Dr. Jacinta Santos**

**Assistant Dean:  
Learner Experience**

# Observerships

**Sim Lab**

**Paediatrics Clinic**

**Lecture**

# D2 Student Lecture

## Mentorship Program

- Gained insight into mentor-mentee relationships in dental education
- Mentors = clinic owners, guiding students in real-world settings
- Mentors provide support and structure to keep students on track for graduation

## Case Study

- Explored breadth of student responsibilities
- Emphasized importance of patient advocacy

# Paediatric Observership

**Dr. Keith Da Silva**

## Paediatric Dentistry & Public Health

- Learned to adapt communication and behaviour styles
- Observed how to assess and handle different patient temperaments
- Gained insight into proper oral care for young children
- Explored ways to ensure children receive consistent care and don't get overlooked

# What is an Intraoral Scanner?

- Hand held device
- Takes thousands of images in patient's mouth
- Images put together to create 3D model
- Model displayed on screen

# Intraoral Scanners & Education

**Green** – The result is **not within** the specified **value range**, however the user is still **able to improve** the preparation

**Blue** – The result is **within** the specified **value range**

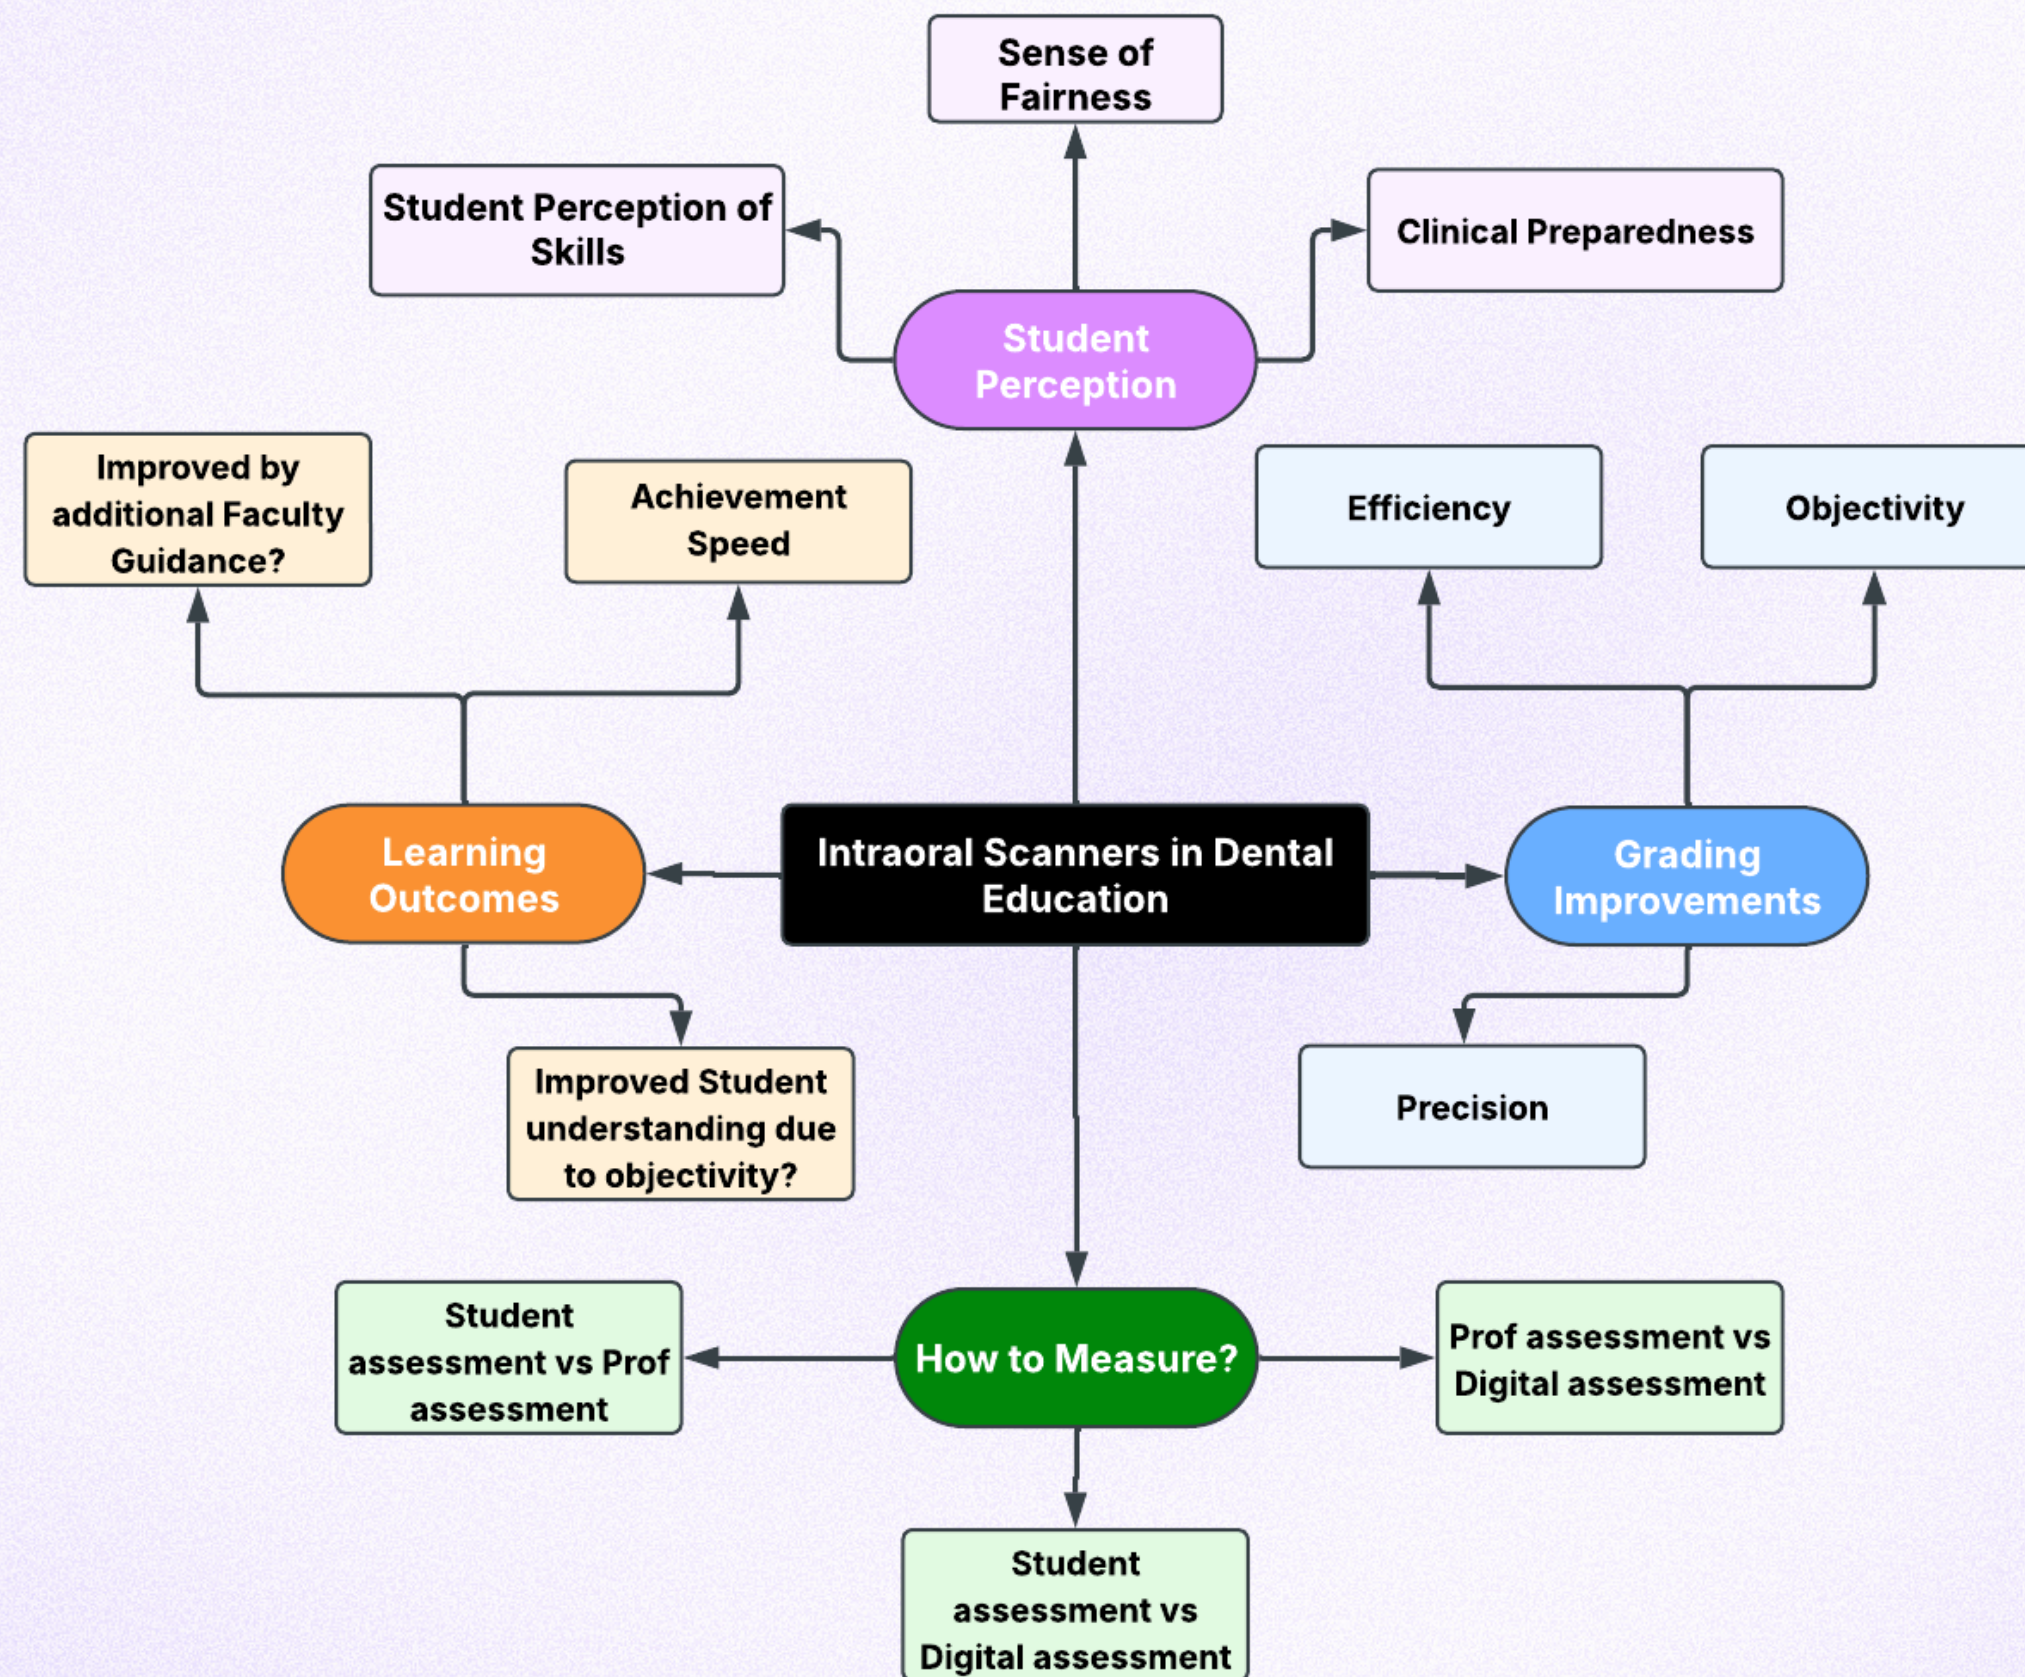

**Red** – The Result is **not within** the specified value range and **no further improvements** are possible

# Developing the Research Objective

## Finalized Objective:

To assess the impact of digital scanners on **interrater reliability** and dental students' **self-awareness** of their work, particularly concerning understanding **learning objectives** during preclinical training in dental schools.
